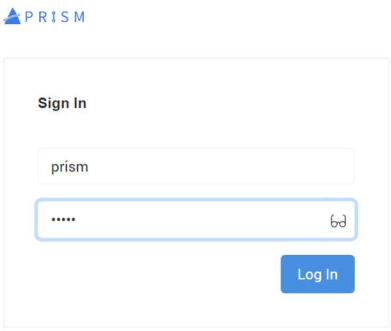
How to adjust the web service port settings

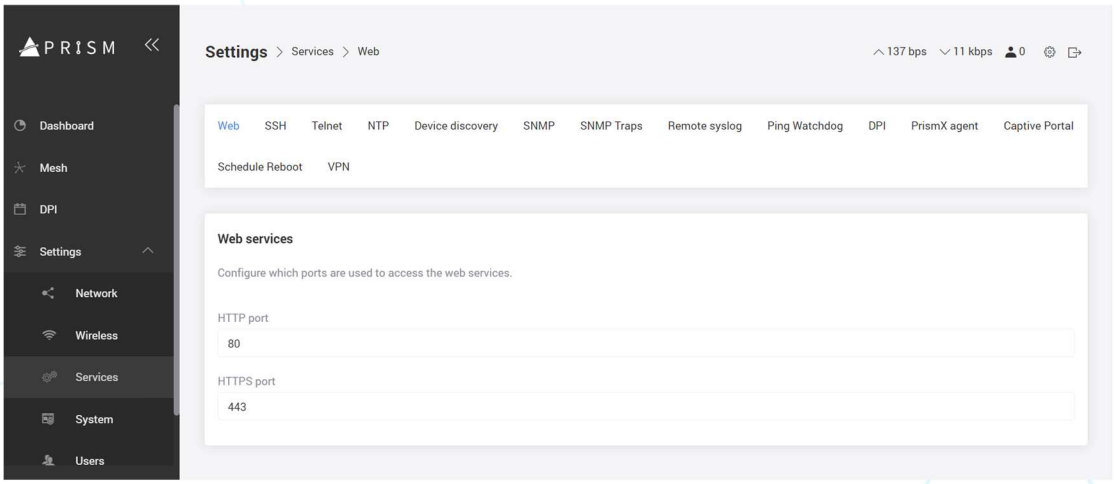
A "web service port" typically refers to a specific port number on a server that is designated for hosting web services. A port is a communication endpoint in a network, and each service or application on a server is assigned a unique port number. For web services, common port numbers includes: HTTP port 80 and HTTPS port 443. You can follow the steps below to adjust web service port for MI10 and MO10.

1. Access the device settings menu via Ethernet.
   (1) Configure your PC's IP setting to static and then set the IP address to any address from 192.168.19.2 to 192.168.19.250
   (2) Connect your PC's network port to the device WAN port.
   (3) Enter the IP address 192.168.19.1 in your browser.
   (4) In the PRISM login screen use the following login:
   Username: prism
   Password: prism



Note:
1. If the device IP address and username/password have been changed, please use the new IP address and username/password to login.
2. You can refer to the Quick Start Guide for more information on how to login device.

2. After logging in to the device's web GUI, navigate to the Settings/Service/Web to show the web services settings page.



3. The default settings for HTTP and HTTPS ports are 80 and 443, you can adjust the ports as you need.
