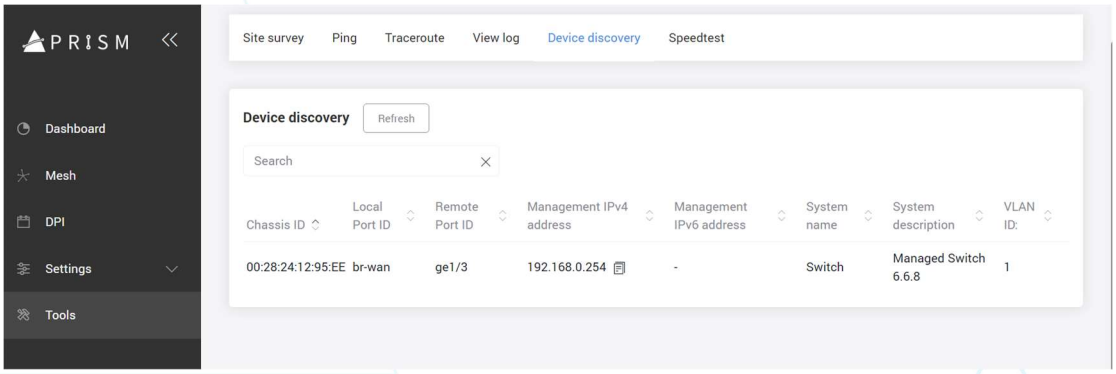
How to show the nearby devices with LLDP discovery

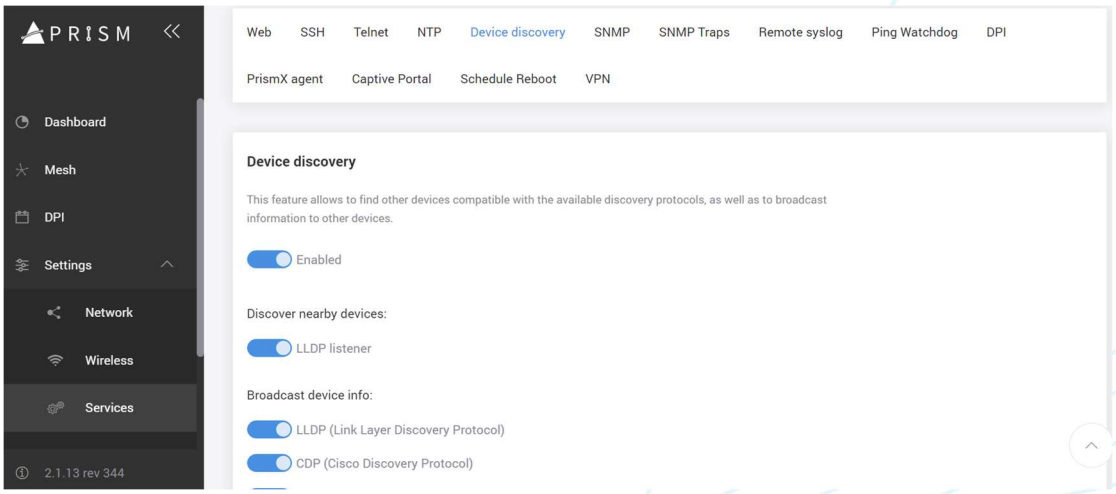
LLDP stands for Link Layer Discovery Protocol. It is a vendor-neutral link layer protocol used in computer networking to discover information about neighboring devices on a local area network. You can follow the steps below to show Device discovery result for MI10 and MO10.

1. Access the device settings menu via Ethernet.
   (1) Configure your PC's IP setting to static and then set the IP address to any address from 192.168.19.2 to 192.168.19.250
   (2) Connect your PC's network port to the device WAN port.
   (3) Enter the IP address 192.168.19.1 in your browser.
   (4) In the PRISM login screen use the following login:
   Username: prism
   Password: prism

   Note:
   1. If the device IP address and username/password have been changed, please use the new IP address and username/password to login.
   2. You can refer to the Quick Start Guide for more information on how to login device.

2. After logging in to the device's web GUI, navigate to the Tools/Device discovery to show the Device discovery page. It will show the searched result at this page.





3. To run Device discovery, you need to enable LLDP listener first. You can navigate to Settings/Services/Device discovery page to enable or disable LLDP listener.
   The default settings of LLDP listener is enabled.
